

SuperPak Dewatering System

SuperPak Dewatering system is a popular option in our Camel line of Sewer and Catch Basin Cleaners.

SuperPak allows the operator to compress the payload inside the debris body to squeeze water out of the payload. This process allows the operator to take a drier load of debris / material to the dumpsite. This is accomplished by utilizing the Camel's patented pusher-plate system.

The SuperPak option can also be retrofitted to most existing Camels with pusher plates.
