

SUPERSUCKER®

DETACHABLE SEPARATOR SYSTEM

SUPERSUCKER®
Brand of Vacuum Loaders & Cleaners

Note – Not all items shown are standard.

General Description

The Supersucker® Industrial Vacuum Loader can be equipped* with a detachable separator system to provide a controlled, continuous discharge of liquids, solids, dry material or slurries into bags, drums, trucks and/or roll-off containers without a need for interruption while vacuuming. Integrating the separator unit is accomplished via connection to either the boom hose or port hole connection. Positioning the unit over the receiving container allows the hydraulically powered knife gate valves with stainless steel gates to be programmed to match load rate for maximum performance.

*Consult factory for retrofitting applications on to other makes of vacuum loaders.

Controls

The separator is powered via the Supersucker® main hydraulic system and 12-volt system. The separator unit is controlled by a hand-held pendant which includes these functions: adjustable knife gate valve cycling, elevation up/down, power rotation (optional) and on/off controls.

Elevation/Rotation

The separator unit can be rotated approximately 140 degrees from the transport position and elevates to a clearance of nine feet to load receivable type containers.

Detaching

The separator can be easily detached from the Supersucker® unit to enable the operator to “leave it behind” if it's not needed. The separator can also be used remotely from the Supersucker® unit by utilizing extension hydraulic lines and power cord.

Specifications

- Weight – 2300 lbs.
- Gate Valve Diameter – 12"
- Discharge Clearance when Fully Elevated on Supersucker – 9'
- Adjustable Tripod Legs
- Cleanout Ports, Top and Bottom
