

# **SUPERSUCKER® HIGH DUMP**    **SUPERSUCKER®** Brand of Vacuum Loaders & Cleaners

---

Supersucker trucks equipped with the **SUPERSUCKER® HIGH DUMP** option, give the unit the capability of unloading material into roll off containers. The design of the **SUPERSUCKER® HIGH DUMP** enables the Supersucker unit to retain its low center of gravity.

The Supersucker unit is kept in a normal horizontal position during transit and during vacuuming operations, which allows for even loading of material and full utilization of the large Supersucker collector body.

The unique design of the **SUPERSUCKER® HIGH DUMP** allows the unit to be unloaded with or without raising the rear of the unit, so normal unloading jobs are unaffected. The unique hydraulic system allows the operator to raise the rear of the unit to position it over the container. **SUPERSUCKER® HIGH DUMP** allows baghouse and separator dust to be emptied simultaneously with the unloading of the collector body. Another important benefit is that baghouse filtering capacity has not been compromised.

Due to the superior design, Supersuckers, with **SUPERSUCKER® HIGH DUMP**, retain their standard high capacity filtration systems. In addition to all these features, the dump angle remains at 51 degrees.
